

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. THE STATE OF NEW HAMPSHIRE.

OFFICE OF THE REGISTRAR OF VITAL STATISTICS.

CONCORD, Oct. 1, 1898.

To His Excellency the Governor and the Honorable Council:

I have the honor to submit herewith, in accordance with the laws of the State of New Hampshire, the sixteenth report relating to the registration of births, marriages, divorces, and deaths in this state for the years ending December 31, 1896, and December 31, 1897.

The number of births reported in the state for the year 1896 was 8,434, or 182 more than was reported in 1895; the number of marriages was 4,032, or 17 more than was returned in 1895; the number of deaths was 6,791, or 138 less than in 1895.

The number of births reported in the state for the year 1897 was 8,459, or 25 more than was reported in 1896; the number of marriages was 3,776, or 256 less than returned in 1896; the number of deaths was 7,027, or 236 more than was returned in 1896.

The total population of the state, according to the census of 1890, is 376,530, and the proportion of births, marriages, and deaths, to each one thousand of the population, is as follows:

For the year 1896, birth-rate, 22.40; marriage-rate, 10.71 (couples); divorce-rate 1.08; death-rate, 18.04.

For the year 1897, birth-rate 22.46; marriage-rate, 10.03 (couples); divorce-rate, 1.14; death-rate, 18.66.

The tables have been arranged substantially as in the last registration report.

Reference should be had to the index at the end of this volume for any subject included in this report.

Respectfully submitted,

IRVING A. WATSON,

Registrar of Vital Statistics.

Table No. 2 represents the population of New Hampshire for each year from 1880 to 1897, inclusive, and is calculated from the census returns of 1880 and 1890. In this table the population for each year, except 1880 and 1890, is calculated, and is believed to be approximately correct. The figures in the table mentioned are estimated upon the basis that there has been a steady increase in the population in the same ratio as was shown between the census returns of the two years named.

Table No. 14 represents the percentage of American and foreign born persons married, by counties, for each year from 1882 to 1897, inclusive. This table gives an opportunity for a more detailed study of the question of marriages by nativity than is furnished by Table 12.

Table No. 15 presents an interesting study of the divorce question from the standpoint of numbers from 1870 to 1897, inclusive. It will be seen that there has been a relatively large increase in the number of divorces granted in recent years in New Hampshire, that of 1897 being the largest number ever decreed in the state in one year.

Table No. 19, above given, represents the total number of deaths registered from 1884 to 1897, inclusive, with the percentage for each year to each 1,000 of the population. The lower rates represented in the first years included in the table are, without doubt, due to the fact that a complete registration of deaths was not made to the state in those years. It is believed that the returns since the year 1889 have been as nearly accurate as it is possible to secure under any system of registration. For the past eight years the statistics may be considered as very reliable. The heavy mortality rate in 1892-1893 was due largely to epidemic influenza, which, aside from being a direct cause of death, considerably increased the death rate in certain other diseases.

* Population estimated for all but census years.

Table No. 39 exhibits the number of deaths from the more prominent so-called zymotic diseases, 1884-1897, inclusive. This table presents an interesting study in showing the fluctuations in these diseases from year to year. It will be seen that of all the diseases in this class, cholera infantum causes the greatest number of deaths, while typhoid fever holds the second place, and diphtheria the third. These diseases belong to a class largely preventable, and it is very gratifying to note that in 1897 the total number of deaths in this class was less than that of any year of which we have a record.

*Including fever, bilious, intermittent, malarial, and typho-malarial fevers.

Table No. 41 gives the mortality from the principal local diseases, so-called, from 1884 to 1897, inclusive. The average number of deaths from this class of diseases, since 1884, has been 2,701; for 1897, it was 3,133, a larger number than ever before returned in a single year. The increase in the number of deaths from Bright's disease is especially notable.

Table No. 43 shows the mortality from twenty prominent causes of death from 1884 to 1897, inclusive. In this table consumption heads the list, as it always has done, with one exception of the year 1892, when pneumonia ranked first and consumption second. This was doubtless due to the prevalence of la grippe. The mortality from the causes named for the year 1897 is shown in the first column; the number for each of the other years may be found by consulting the Registration Report for the given year. These diseases are placed in the order of their fatality, and the fluctuation in this order from year to year is shown by the figures in the columns under the respective years.

* Fever, bilious fever, malarial, intermittent, and typho-malarial fevers included.

† Meningitis and cerebritis included. ‡ Classed with atrophy and debility.

Table No. 44 shows the mortality from consumption from 1884-1897, inclusive, the percentage of deaths to deaths from all diseases, and the death rate per 10,000 of the living population.

In the following tables, Nos. 46 to 67, inclusive, will be found a statement of deaths from pulmonary consumption, by seasons, ages, and nativity, for all the cities of the state. These tables are given, together with others, for the purpose of furnishing all the data possible in relation to this, the most fatal of all diseases.

Table No. 85 gives the number of deaths from cancer, with rates to the estimated population and to the mortality from other diseases, 1884 to 1897, inclusive. The most remarkable feature of this table is the striking uniformity in the number of deaths from this disease annually.

It is gratifying to note that in recent years there has been a diminution in the number of deaths reported annually from diphtheria. This is no doubt due to a better knowledge of the value of isolation and disinfection, and to greater efficiency in local boards of health.

Table No. 91 shows the number of deaths from typhoid fever for the past fourteen years, together with the ratio to deaths from all causes and to each 10,000 of the living population. It will be observed that in 1897 there were a smaller number of deaths from this disease than have before been returned in a single year.
